

User Personas

CSC231 Agile Software Engineering & CSC234 User-Centric Mobile App Development
Group 2 Semester 2/2568

Feature Coverage

Lin covers everyday-user features (intensity, AI detection, ecosystem garden, tokens, harvest). Som covers safety-net features (Tiered Intervention, Insights screen, disclaimer).

Pivot Feature	Lin	Som	Primary Tester
Mood entry: 6 emotions × intensity 1–5 (with haptic ticks)	●●●	●●○	Lin (everyday user)
AI suggestion pill (Gemini via Cloud Function, 600 ms debounce, no confidence badge)	●●●	●●○	Lin (everyday user)
Mood-over-time line chart (Patterns tab, 7d/14d/30d)	●●○	●○○	Lin (everyday user)
Garden Health EWMA + 5 plant tiers (NEVER dead)	●●●	●●○	Lin (everyday user)
Animated atmosphere (clouds, rain, butterflies, birds — 14 s loop)	●●●	●○○	Lin (everyday user)
Pattern Engine (5 algorithms) + Recent-Triggers ↔ marker-band link	●●○	●●●	Som (vulnerable user)
Tiered Intervention IN-APP BANNER (Open + I'm okay) — primary surface	●●○	●●●	Som (vulnerable user)
24h entry immutability	●●●	●○○	Lin (everyday user)
Tier 1 Breathing / Tier 2 Journaling / Tier 3 Crisis screens (Hotline 1323 + 1669)	●○○	●○○	Either
Quote library — Tier 3 type-level fence (no Gemini ever); Tier 1/2 hybrid + Safety Filter	●●●	●●●	Either
Weekly Harvest cycle (condition-based trigger, auto-modal, "Continue to new week")	●●●	●○○	Lin (everyday user)
Token economy (5 first log + 1 each to cap 10/day; mood-agnostic; midnight reset)	●○○	●●●	Som (vulnerable user)
Dual-layer skin economy (global Garden Skin + per-species PerSpeciesSkin, layered)	●●○	●○○	Lin (everyday user)
Bipolar disclaimer (5 placements: onboarding slide 5, footer, inline banner on Patterns, ack dialog, Settings panel)	●●○	●●○	Either
Privacy Lock (PIN + biometric; WebAuthn on Web for cold-boot)	●●○	●●○	Either

Lin Worachat

Primary Persona *The Overwhelmed Student Journaler*

Age	21
Occupation	3rd-year CS undergrad at KMUTT

Background

Has mild generalized anxiety. Tried three mood-tracker apps and uninstalled them. They felt like homework. MoodBloom won because the centre Add tab on the bottom nav lets her log in seconds, the AI suggestion pill drafts a mood for her after she types a sentence, and the toast on save ("Your mood is now part of this week's garden.") is the entire confirmation.no animation, no streak nag. She loves the animated atmosphere including clouds drift, butterflies flutter. But plants stay sheltered even when it rains.

Goals	Pain Points
- Log a feeling in under 30 seconds and feel done - See her garden evolve without being judged on bad days - Earn tokens just for showing up. Collect favorite flower skins, layer a per-species skin on her sunflower - Read the week's harvest summary, archive it, start fresh on Monday with no streak shame	- Long emotion lists feel like pre-work; she wants a sentence to translate to mood + intensity - Apps that punish negative moods (wilting, dying plants, lost streaks) - Streak-shaming triggers her anxiety. She needs missed days to be empty slots, not failures - AI that overclaims feels patronizing. The suggestion pill must allow one-tap override

“ I don't want an app that makes me analyze my feelings. I want one that meets me where I am, even on bad days. ”

Som Phetchaburi

Secondary Persona *The User the Tiered Intervention Exists For*

Age	17
Occupation	Mathayom 6 student in Bangkok

Background

Downloaded MoodBloom because a friend said "it's cute, you get a garden." Doesn't think she has a problem just tired from exam prep, a recent breakup, and feeling unheard at home. Three weeks of negative entries at intensity 3–4. Her garden's atmosphere has been mostly rain and storm but plants stay sheltered and alive, which feels right. The first time she opened the Patterns tab, the screen showed a small banner asking her to read the disclaimer before the chart unlocked; she tapped through and the chart appeared. When the in-app banner appeared at the bottom of Home one evening with a Tier 1 breathing nudge, she swiped it away and it didn't come back for two days. That mattered to her.

Goals	Pain Points
- Quiet place to note feelings without telling anyone - Watch the garden hold its ground even on rainy weeks - Not be told she has a clinical condition (no diagnosis labels)	- Adults telling her to "just talk to someone" but she can't afford it - Apps that pathologize ordinary sadness or imply diagnosis - Notifications that feel nagging or demand action

Goals	Pain Points
• Receive gentle support when patterns emerge but be free to dismiss without burning a bridge • Tier 3 messages that say the safe, right thing when she's most vulnerable	• AI hallucinating a message at Tier 3. The worst possible failure mode at the worst possible moment • A disclaimer that interrupts her flow. She prefers an inline banner over a non-dismissible modal-route gate

“ *I'm not depressed. I'm just tired. I want a quiet place that notices, but doesn't freak out.* ”
