Lin Worachat: Evening Logging with Weekly Harvest

Tuesday at 10:47 p.m. Lin just finished a long coding assignment. She opens MoodBloom. She's logged for 6 days and the 7th-day harvest signal is pending tomorrow morning.

Step 1	Step 2	Step 3	Step 4	Step 5
				
Uncertain	Neutral	Hopeful	Relieved	Delighted

#	User Action	Emotion	Pain Point	Quality Risk → Fix
1	Opens app → Home tab. SkyHeader shows clouds drifting and a butterfly. Taps the centre Add tile on the bottom nav.	 Uncertain	Cold-start delay would break her 30-second goal	Performance: time behavior <i>Skeleton screen; offline-first save; Drift-first persistence</i>
2	Log Mood screen: header "How are you feeling?". Picks Anxious from the 3×2 grid; intensity slider thumb tints amber, haptic clicks at each tick.	 Neutral	Wants intensity 4 not 3 and needs easy adjustment	Usability: operability <i>48dp slider with haptic; tap-to-jump and drag both supported</i>
3	Types in NOTE: "ugh today was so long but at least I finished it". After 600ms of silence (debounce), the AI suggestion pill appears: "Tired, intensity 3 · Use this?". She taps Use.	 Hopeful	Wonders if AI got it wrong and no confidence badge shown	Functional: AI correctness, override UX <i>Tap to accept OR ignore and pick manually; AI is suggestion, never authority</i>
4	Bumps intensity to 4. Taps "Save to your garden". Toast appears title "Saved", body "Your mood is now part of this week's garden." Returns to Home. SkyHeader's day-7 slot now has a fresh anxious-leaf plant. Token pill shows +1 (today's 2nd log, so +1 not +5).	 Relieved	If toast said anything mood-shaming she'd quit	Satisfaction: copy correctness <i>Locked copy in LogMoodCopy strings; mood-agnostic confirmation</i>
5	Next morning: Wednesday. Home screen auto-opens the Weekly Summary bottom sheet (pending-harvest signal from yesterday's 7th-day boundary). Hero garden bed, avg mood -0.3, dominant emotions: Anxious(3) Tired(2) Hopeful(2). She taps "Continue to new week". Modal closes, fresh canvas. Tap History → Harvest tab → last week's archive card is now there.	 Delighted	If copy said "deleted/cleared" she'd feel loss	Functional: copy correctness (locked phrase) <i>Locked harvest banner: "Your garden this week has been harvested and saved to your history. A new week begins with a fresh canvas for your story." enforced by CLAUDE.md copy rules</i>

Story	As a... I want... so that...	Pri	WBS
US-Lin-1	As a tired student, I want to log a mood in under 30 seconds with AI assist and have the AI never overclaim.	Must	3.4, 3.6
US-Lin-2	As an everyday user, I want my garden to stay healthy even on rainy days so I don't feel punished for negative moods.	Must	4.2, 4.3
US-Lin-3	As a long-term user, I want the harvest cycle to auto-archive last week and give me a fresh canvas, with all past weeks browsable in the Harvest tab.	Must	6.1
US-Lin-4	As a casual user, I want tokens for showing up, never tied to mood content and I want to layer a per-species sunflower skin on top of my global garden skin.	Should	6.2, 6.3

Som Phetchaburi: Tiered Intervention Escalation (Tier 1 → 2 → 3, in-app banner)

Three weeks of mostly negative entries at intensity 3–4. The Pattern Engine watches with 5 algorithms. The PRIMARY intervention surface is the bottom-anchored in-app banner and FCM. Banner buttons are "Open" and "I'm okay". Cooldown is global across tiers (a Tier 1 today blocks ANY tier for the next 48h).

Step 1	Step 2	Step 3	Step 4	Step 5
				
Frustrated	Neutral	Uncertain	Frustrated	Neutral

#	User Action	Emotion	Pain Point	Quality Risk → Fix
1	Day 7 evening: Logs "tired" intensity 4. Mann-Kendall Z = -2.21 (significant trend). Tier 1 fires. In-app banner slides up at bottom of Home: "It looks like your garden has had some rainy days. Would you like a 2-minute breathing exercise?" plus footer in small italic dim text: "MoodBloom is not a medical device. Not a substitute for professional care." Two buttons: "Open" and "I'm okay".	 Frustrated	If banner felt nagging or modal, she'd close the app	Satisfaction: non-coercive surface <i>Bottom-anchored, dismissible, in-app; 14pt body + 10pt italic footer; swipe-right to dismiss</i>

#	User Action	Emotion	Pain Point	Quality Risk → Fix
2	Taps “Open” then Router pushes <code>intervention.breathing</code> to <code>BreathingSheet</code> . 2-minute paced animation. She finishes; “I’m done” returns her to Home. Banner is gone. <code>CooldownGuard</code> wrote <code>lastTriggeredAt = now</code> , so no further intervention for 48 h regardless of tier.	😐 Neutral	Gemini hallucination would break trust at vulnerable moment	Functional: Tier 1 quote safety <i>Tier 1/2 path: Gemini suggests via Cloud Function <code>suggestQuote.ts</code>, Quote Safety Filter validates (100% reject rate on 55 adversarial inputs), fall back to curated phrase on reject</i>
3	Day 10: 5 of last 7 days negative. Pattern Engine emits Tier 2 trigger. <code>CooldownGuard</code> blocks (still inside 48h window from Day 7). The trigger is logged to <code>patterns/{date}</code> but no banner fires. Test proof with TC-31, TC-32.	😬 Uncertain	Intervention fatigue from rapid-fire alerts	Functional: dosing rules (global cooldown) <i>48h cooldown is GLOBAL across tiers, not per-tier by design, prevents nag spirals; Tier 2 silently logged for Insights</i>
4	Day 13 evening: 3 consecutive $S \leq -0.6$. Tier 3 fires. Now outside the 48h cooldown. Type-level fence: <code>TieredInterventionDispatcher</code> hard-branches on <code>tier == Tier.three</code> BEFORE any AI repo call is reachable. <code>AIAllowedTier</code> enum is {one, two}, so Tier 3 path cannot compile a Gemini call. Banner appears with <code>errorContainer</code> color: body is byte-for-byte from the 8-item curated Tier 3 pool. Tap Open then <code>CrisisResourcesScreen</code> : Hotline 1323 tile, Department of Mental Health link, “What to expect when you call” expansion, emergency 1669.	😡 Frustrated	Wrong message at Tier 3 could cause real harm	Safety: deterministic output (TC-40) <i>Type-level fence (<code>AIAllowedTier</code> enum) + runtime fence (Tier three short-circuit) + test (<code>tiered_intervention_dispatcher_test</code> 130 asserts <code>ai.calls</code>, <code>isEmpty</code> for Tier 3)</i>

#	User Action	Emotion	Pain Point	Quality Risk → Fix
5	Som taps the Patterns tab the next morning. Pre-ack: chart visible, but a small banner inline reads "Read about how to interpret these insights". She taps it. Non-dismissible <code>DisclaimerAckDialog</code> : title "A note about MoodBloom", body "MoodBloom is not a medical device. It cannot diagnose conditions like bipolar disorder, depression, or anxiety. Consult a qualified professional.", button "I understand". She taps. State persists to <code>users/{uid}.insightsDisclaimerAced = true</code> . Marker band + Recent Triggers list appear. Tapping a Recent Triggers row highlights the matching marker dot on the chart for 600 ms	 Neutral	A modal-route gate that interrupts her flow would feel coercive	Functional: disclaimer placement <i>INLINE banner-to-dialog pattern: chart is visible pre-ack, but insight content (markers, Recent Triggers) is gated behind the ack. Dialog itself is non-dismissible.</i>

Story	As a... I want... so that...	Pri	WBS
US-Som-1	As a user with persistent low mood, I want a gentle Tier 1 banner offer when a pattern is detected at bottom-anchored, dismissible, in-app, not a clinical push notification.	Must	5.3, 5.4
US-Som-2	As a user receiving any intervention, I want a personalized supportive quote that's always safe and there are no AI hallucinations at vulnerable moments. Quote Safety Filter rejects 100% of unsafe outputs.	Must	5.5
US-Som-3	As a user in deep distress (Tier 3), I want crisis resources + Hotline 1323 + emergency 1669, with completely deterministic copy. No AI variance. Type-level fence prevents the code path from even existing.	Must	5.4, 5.5
US-Som-4	As a user viewing Patterns, I want a clear disclaimer that this app cannot diagnose conditions, but I don't want a non-dismissible modal-route gate interrupting my flow. Inline banner-to-dialog is	Must	5.6, 7.4
US-Som-5	As a user, when I tap "I'm okay" on a banner, I want the next 48 hours of nudges blocked with the global cooldown, no double-nag but my next 48h+1 intervention is still available when the pattern persists.	Must	5.4, 5.5
